Education

- **Worcester Polytechnic Institute** Worcester, MA
  M.Sc. Computer Science *May 2021*
  - Coursework: Machine Learning, Deep Learning, Computer Vision, Algorithm Design & Analysis, Theory of Computing, and Computer Networks
- **Worcester Polytechnic Institute** Worcester, MA
  B.Sc. Computer Science Cum Laude *May 2020*
  - Coursework: Artificial Intelligence, Software Engineering, Cryptography, Computer Architecture, Operating Systems, Databases, Machine Organization & Assembly, etc.

Projects

- **Learning Deep Social Interactions to Identify Positive Climate** Worcester, MA
  M.Sc. Thesis *May 2020 - Present*
  - Applied Deep Learning to affective computing for automated classroom observation evaluation
  - Designed participant tracking-focused architecture for capturing CLASS details associated with positive climate
  - Applied Graph Convolutional Networks (GCN) on social network graph representations of the scene
  - Constructed pipeline for assembling network representation of social scenes to achieve performance difference exemplified in simulation
- **Automated Corrosion Assessment and Data Collection** Cape Canaveral, FL
  U.S. Army Research Lab Collaboration *January 2020 - May 2020*
  - Developed iOS application for efficient on-site data collection, editing, and viewing
  - Deployed RESTful API with support for multi-dimensional data submissions, user account registration and authentication, visualization tools, and download endpoints via web interface
  - Prototyped CNN and SVM classification models for remote corrosion rating per ASTM D1654
- **Augmented Reality for Improving Human-Swarm Interaction** Worcester, MA
  B.Sc. Capstone Project *August 2019 - March 2020*
  - Developed ARGoS-based swarm control system on the Magic Leap headset with mixed-modality control options, combining gesture and voice recognition
  - Combined control system with visualization layer to enable easy swarm-wide debugging
  - Published findings, including an outlined user study plan for evaluating methods against existing tablet-based system
- **Forgery Recognition Through Handwriting Style Emulation** Worcester, MA
  Team Project *August 2019 - December 2019*
  - Analysed state-of-the-art machine learning algorithms for handwriting style extraction and synthesis
  - Designed reinforced GAN for synthesis and Siamese network for forgery generation and evaluation
- **Chess Piece Image Classification** Worcester, MA
  Team Project *August 2019 - December 2019*
  - Used data generation techniques to build robust dataset coverage of objects
  - Implemented CNN using Keras and evaluated multiple computer vision preprocessing techniques
  - Achieved 94% classification accuracy while maintaining invariance to rotation, scale, translation, etc.

- **Brigham & Women's Hospital Kiosk** Worcester, MA
  Assistant Lead Software Engineer *January 2018 - May 2018*
  - Designed, developed, and tested pathfinding kiosk software as part of an Agile team
  - Conducted market research through interviews and surveys for usage patterns and requirements
  - Created process maps and diagrams based on business architecture solutions using case diagrams, activity diagrams, and UML flowcharts
  - Authored well-engineered solutions using test-driven methodologies

Work Experience

- **Worcester Polytechnic Institute** Worcester, MA
  Teachers Assistant *August 2020 - October 2020*
  - Held office hours and graded assignments for Mobile & Ubiquitous Computing
- **Worcester Polytechnic Institute** Worcester, MA
  Graduate Research Assistant *May 2020 - August 2020*
  - Collaborated with Professor Jacob Whitehill for proofing tracking-based CLASS prediction models in simulation
- **Proofpoint** San Francisco, CA
  Software Engineering Intern *June 2019 - August 2019*
  - Developed internal CLI tool for deployment of a Docker-based testing environment to improve and abstract all individual testing cases
  - Automated product backend upgrade testing jobs in Jenkins
- **Cloudflare** San Francisco, CA
  Operations Intern *June 2018 - August 2018*
  - Designed system for identifying, scoring, and generating optimal sales leads using internal contact data supplemented with additional information scraped from networking platforms
  - Developed scripts used to periodically evaluate client's site status information with 100x efficiency

Competencies

Languages: Python, Java, Go, C, C++, C#, Bash, MATLAB, R, Racket, SQL, x86, F/XML, HTML, LaTeX

Software: Linux, Git, Docker, Kubernetes, gdb, VirtualBox, Unity, Jenkins, Gradle, TravisCI, Valgrind, Wireshark, Jira, Trello, Microsoft Office Suite, G Suite

Frameworks: PyTorch, Tensorflow, Keras, SciKit, SciPy, NumPy, Pandas

Topics: Deep Learning, Computer Vision, Graph Convolutional Networks, Embeddings, Timeseries Processing, Reinforcement Learning, Human-Swarm Interaction, Distributed Robotics Systems
